student of English language and literature faculty,
Igamberdieva Shakhnoza
teacher of English language and literature faculty
Fergana State University

Annotation: Currently, there is a growing interest in the use of interactive methods, innovative technologies, pedagogical technologies in education, one of the reasons why today students are taught only ready-made knowledge, and the use of modern technologies requires them to think independently. It teaches you to search, analyze and draw conclusions.

Key words: technology, multimedia, pedagogical technology, information technology, foreign language, IELTS, trends, result, process, skills

The main goal of all reforms in the field of education is the upbringing of spiritually mature people, the improvement of the education system, the introduction of the educational process based on new pedagogical and information technologies in accordance with modern requirements. That is why today in the education system special attention is paid to the effective use of modern computer and information technologies. This means that in the educational process, teachers teaching students in various disciplines use modern means of information technology, primarily to increase the level of knowledge and skills in this area, technical support of the education system, full access to the Internet, an effective result can be achieved only by. One of the main ways to improve the quality and efficiency of the education system is the use of modern information and communication technologies in the educational process, including multimedia training courses, ensuring interactive interaction between teachers and students, multimedia involvement of highly qualified personnel in the development of training courses and textbooks. We know that today it is difficult to imagine the quality and effectiveness of education without modern computer and information technologies. The National Training Program emphasizes the importance of creating modern educational technologies aimed at solving the problem of mastering the content of education at the stage of developing and implementing a new generation of didactic and information support for the educational process. In particular, the development of methods of integration with science and industry in the educational process, their introduction into practice, the individualization of theoretical and practical training and self-study, as well as the development of distance learning technology, its tools, the development, acceleration of student learning based on new pedagogical technologies. Both information technologies and distance learning technologies are among such urgent tasks. One of the important factors in improving the effectiveness of education today is the use of technical means. This, in turn, increases interest in language learning and the quality of lessons taught, making students more active in the learning process. If the methods are chosen correctly in the learning process, the desired result can be achieved in a short time. Continuous improvement of the education system, the organization of lessons based on pedagogical innovations, the successful implementation of which is one of the urgent tasks facing higher education institutions, are important tasks for professors and teaching staff of higher education. Modern technologies have witnessed many changes around the world, and these changes have improved the standard of living and well-being of people. Since technology has been applied in various fields, the whole world has become a global arena, and people can perform all kinds of activities very efficiently in a matter of seconds. However, with the introduction of the

latest technological innovations in the field of education, the field of education has also received more advantages. In the current generation, there have been drastic changes in the views and methods of teaching modern students. When learning a language such as English, they do not accept traditional methods and approaches to language teaching. But they are very interested in the latest styles, methods and approaches to teaching English. The same situation can be observed when teaching English to people studying a second or foreign language. Thus, some modern English teachers have understood the situation in a timely manner and are introducing new technologies in teaching, as well as the latest methods and approaches. To make learning English exciting for students, teachers should always strive to master innovative technologies and be aware of current IELTS trends. Technology has brought a new dimension to education. In our digital age, it is not possible to use chalk and a blackboard, and digital, intelligent or interactive whiteboards have been installed instead, which has reduced the burden on teachers and increased student concentration. As a result, students develop a positive attitude towards the use of content, and teachers encourage them to use a computer, laptop, OHP, mobile phone, tablet, and so on. able to encourage them in a positive way using existing technologies such as. In addition, teachers use digital texts and real materials in their classrooms to stimulate students' interest in the essence of learning. In recent years, the issue of using modern technologies in the educational process has become acute. These are not only new technical means, but also new forms and methods of teaching, a new approach to learning. Our main goal in learning a foreign language using modern technologies is to improve the quality of teaching students a foreign language, the formation and development of their communicative culture, how to effectively use technology to master practical skills. - show me. Today we live in a world where computers dominate the world. Just as technology plays an important role in business relationships, entertainment, music, movies, and almost every aspect of our daily lives, it also plays an equally important role in education. Studies have shown that 90% of students have access to one or another type of computer or mobile device at school, at work or at home. Thus, it is not surprising to see that the evolution of classes and teaching methods is being discussed in the direction of technology. In recent years, new, technologically integrated classes have become popular when learning languages. Mixed education, virtual classrooms and education management systems are examples of this era of new teaching methods approved by the best teachers. These methods include using language learning technology to increase student engagement, facilitate the role of the teacher, and provide systematic, comprehensive learning for all participants. The most inspiring aspect of technology is its ability to reach audiences around the world. Involving local teachers in language learning and enrolling students in courses taught by native speakers is what it means to ensure proper immersion. Listening to a language course online gives almost anyone access to this course and its resources. The technology of language learning in educational centers is not the future, but the present education. The use of new technologies in the classroom has become a great addition to language acquisition, and along with technological support, English language courses are the most effective and necessary for students who want to succeed in their studies. Technology is also more useful in training successful teachers. In fact, successful teachers are those who have a high level of interpersonal relationships, and they have a real opportunity to meet children wherever they are and hear their words sincerely. In addition, successful teachers should have a deep understanding of the taught material and its modesty, beloved individuality and their interactions, as well as be able to communicate and respect their students. In addition, successful English teachers should make the most of existing technologies, use classrooms, as well as interesting materials downloaded from the Internet for their students.
